## About this book

**Entrepreneurship, Growth and Innovation** provides comprehensive insight into the economics of entrepreneurship, claiming that this recently established discipline should establish a framework of analysis that integrates the understanding of the determinants and the effects of both entrepreneurship and innovation without neglecting the functioning of the inducement mechanisms. For this purpose, the book combines theoretical prescriptions and international empirical evidence. Contributions by some of the best known scholars in the field of the economics of entrepreneurship and innovation investigate whether the interrelationships between the forces that affect firm and industry dynamics and ultimately determine economic growth are subject to change across countries and over time. The analysis of different national cases puts forward that the relationship between entrepreneurship and growth via innovation is shaped by the context of country-specific institutions and industries, thereby providing hints for industrial and innovation policy.

### Written for:

Undergraduate/graduate students and specialists in the fields of industrial organization, development economics, and regional studies
